

Data Corrections

Sometimes EA produces incorrect/contradictory information. LemonTree corrects them as follows:

Element type	Property	Old value	New value	Description
Activity	HasCompositeDiagram	true	false	We've seen a rare example that the flag "HasCompositeDiagram" is set to "true" in a model (EAExample) even when there is no composite diagram available and the element itself is on no diagram. LemonTree corrects that to "false". The property itself is most probably only responsible for the check "Composite" in the context menu of the element which is misleading in this case because it is wrong.
