

Release 1.6

Overview

LemonTree 1.6.0 was released on 04-06-2018.

LemonTree 1.6.1 was released on 15-06-2018.

What's New

★ New Feature ★ Non-Critical Bugfix ★ Critical Bugfix

	Issue	Description	In Version
★	eapx support	LemonTree now supports .eapx - files from EA 14.	1.6.0
★	SmartGIT support	LemonTree can now be integrated in SmartGIT as described here: Integrate LemonTree in SmartGit .	1.6.0
★	Performance on writing files	LemonTree has improved performance when writing the merged file.	1.6.0
★	File details	Details of files can be displayed.	1.6.0
★	Link to help page	The "Burger menu" provides a link to the help page.	1.6.0
★	Merge of profiles	Profiles are now merged completely.	1.6.0
★	Premerge calculation	Improved stability of premerge calculation.	1.6.1
★	"Take over" buttons in Tree	In 1.6.0 the buttons took changes recursive. This is corrected. Taking recursive changes only possible via menu "Take Subtree A/B"	1.6.1
★	Run states/Conveyed items	Run states/conveyed items/status are now diffed and merged.	1.6.0
★	Improved correctness	Merges are now performed more correctly and respect some previously missed edge cases.	1.6.0

Not supported EA features

LT doesn't diff these features:

- Slideshows (can be created via "Model Views"; MDG Technology can be used!)
- Diagram filter
- Default diagram

Known issues

- "Take over" buttons take changes recursive: [Fixed in 1.6.1](#).
- When starting a new session in the same LemonTree instance with the same models diagram caching leads to visualization of diagrams from the previous session.
